COMPANION NOTE · PREPARED FOR THE CHIEF DATA OFFICE · LEAD DATA ENGINEER

Different market, **same job.**

Why Lifepal's insurance marketplace maps onto Quilter's wealth platform.

Finance · Marketing · HR · Executive · Product

BUILT AT lifepal → PRESENTED TO Quilter

Both businesses sit between partners who supply products and clients who buy them, and both are regulated on how those clients are treated. At Lifepal the partners were insurers and the products were policies. At Quilter they are fund managers and advisers, and the products are funds inside wrappers. The data problems that follow are the ones NEXUS was built to solve.

ONE FLOW, TWO BUSINESSES

01 Partner	02 Product	03 Client	04 Money	05 Report
Lifepal · Insurer	**Lifepal** · Insurance policy	**Lifepal** · Policyholder	**Lifepal** · Premiums and claims	**Lifepal** · Partner reporting
Quilter · Fund manager · adviser firm	**Quilter** · Fund share class · wrapper	**Quilter** · Investor, often advised	**Quilter** · Contributions and withdrawals	**Quilter** · Board, Finance, Consumer Duty

CONCEPT MAP

same grain, different names

Lifepal · insurance marketplace	Quilter · wealth platform	Grain	Shared data problem
Insurer partner AXA · Sompo	**Adviser channel** Quilter adviser · Independent adviser	one row per partner	Each sees only its own clients: a row filter, not a copy
Insurance product travel plan · motor cover	**Fund and wrapper** ISA · Pension · GIA	share class × version (SCD2)	Charges change mid-year; join the one in force
Application → decision declined · approved, 2nd try	**Transaction → correction** contribution · corrected months later	one row per transaction	Newest CDC wins; replays never double count
Bind rate bound ÷ applications	**Net flows** in − out, fees included	day × wrapper × entity	One definition that reconciles to the ledger
Insurer turnaround application → decision	**Journey time** transfer out · withdrawal	one row per journey	Skewed: median and p90, never the mean
Policyholder data name · ID number	**Client data** NI number · vulnerability flag	one row per client	Masked by tag; outcomes published as aggregates
Late insurer feeds status up to 72h late	**Late corrections** 40 arrive after publish	one row per event	Restated, with time travel showing what was issued
Partner reporting AXA performance pack	**Board and Exec MI** board pack · Exec KPIs	one product per audience	Many audiences, one number

AXA and Sompo are insurer partners from Lifepal. Quilter examples come from the role and public information, and from the synthetic data in this project.

WHAT CARRIES OVER DIRECTLY

proven at Lifepal

One definition per metric

Lifepal: Agreeing "bind" took four workshops; ad-hoc requests then fell 60%.

Here: "Net flows" agreed once with Finance, in a contract, before any dashboard.

Isolation by policy

Lifepal: A row access policy scoped every insurer to its own data.

Here: Affluent and HNW see only their own clients, enforced in Unity Catalog.

Late data, measured

Lifepal: Lookback set at 72 hours, the p99.5 of partner delay.

Here: Corrections months late restate the product, and the issued version stays queryable.

History, not overwrite

Lifepal: Changing attributes kept as SCD2, joined at the time they applied.

Here: Fund charges read as of the trade date, so price-and-value is honest.

Tests before trust

Lifepal: 500+ checks in production; data-trust escalations fell 60%.

Here: Every contract compiles into checks; a pull request can't move a certified number.

WHAT IS DIFFERENT, AND HOW I WOULD ADAPT

Difference	Lifepal	Quilter	How I would adapt
Scale	A mid-size insurance marketplace	£157.4bn of customer investments, several businesses	Same contracts and tests; incremental builds and liquid clustering sized for volume from day one
Regulation	Insurance regulation, customer data protection	FCA: Consumer Duty, SM&CR, operational resilience, UK GDPR	Outcome MI as certified products; every restatement explainable from the Delta history
The estate	One platform, mostly one source per domain	Advice, platform and investment management describe the same client	Data Vault in silver only where several sources meet; Kimball stars in gold
Who reads it	Internal teams and insurer partners	The board, Finance, advisers, Consumer Duty, regulators	Certify a few measures first, metric views as the one definition, Fabric reading gold in place

Stated plainly. Lifepal outcomes come from my own record of the work. The Quilter side is built from outside, from the role and public information; no Quilter systems or data were used.

Open questions for week one: who owns each certified number today, and how a restatement is explained to the board.
